Sinkware
Collection

Welcome...

to Furnware's 2010 Sinkware Collection

⇒ **Abey**

Abey are Australia's leaders in sinkware, designing and manufacturing to the world's highest quality specifications as well as sourcing and bringing you Europe's very best, leading edge designs - practical, affordable, inspirational, stylish, timeless or cutting edge. When you buy an Abey stainless steel sink you receive the highest quality and a 25 year warranty.

⇒ **Forazé**

Imported from France and Italy the Forazé range of stainless sinkware is manufactured with quality and durability in mind. Comprising many unique features and a peace of mind 30 year guarantee, these sinks are sure to satisfy the most discerning of consumers.

⇒ **Veronar**

The Veronar range is ever expanding to satisfy the needs of many clients where value for money is as important as enduring quality. The Veronar Team are constantly quality testing and checking the Veronar product range to ensure it stays at the top of your list.

⇒ **Faucet**

Over the years Faucet Australia has built a brand of trust and respect. Faucet's premium Swirl products are the results of innovative Australian design, solid build quality and the use of fine materials. These products are built in Australia under a stringent quality program, giving us the confidence to offer an industry leading five year guarantee. Faucet holds the Standards Mark Licence and produces tapware complying with AS 3718.

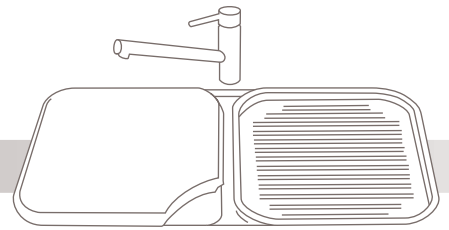

⇒ **Chambord**

Chambord Farmhouse Sinks are made in France from the finest ceramic to stringent quality specifications. With a five year guarantee you can be sure of durability when you purchase a Chambord product.

Abey Quality Sinkware

Abey are Australia's leaders in sinkware, designing and manufacturing to the world's highest quality specifications as well as sourcing and bringing you Europe's very best, leading edge designs - practical, affordable, inspirational, stylish, timeless or cutting edge. When you buy an Abey stainless steel sink you receive the highest quality and a 25 year warranty.

Warranty

Abey's 25 year limited warranty covers defects in manufacture for a period of 25 years from the date of original invoice. Scratching, denting, rusting, spotting or discolouration is not covered by Abey's 25 year limited warranty. Follow our maintenance hints and installation instructions to protect the stainless steel and maintain the appearance of the sink. For more information on Abey's 25 year limited warranty, see the warranty conditions on our website or contact Abey.

Stainless Steel

All Abey stainless steel sinks are manufactured from the finest 304 - 18/10 stainless steel. 18/10 means you get a heavy, strong, durable sink that has been made with a material that has 18% Chromium and 10% Nickel. Chromium and Nickel are added at the melting stage in the steel making process so that stainless steel is "stainless all the way through". There is nothing to wear, chip, or peel off.

Stainless steel develops an invisible, tenacious and highly protective chrome oxide film on the surface which gives the exceptional corrosion resistance properties, and infinite longevity, of stainless steel. Stainless steel is not guaranteed to be free from corrosion. It is important to properly care and maintain the sink to protect the stainless steel and help keep the finish corrosion free. Rusting and spotting can occur if common household detergents such as bleaches are allowed to sit on the surface without dilution of water. Allowing other metal objects to sit on the surface in the presence of water can also promote rusting and spotting.

Installation

Installation of the sink is the responsibility of the customer or the customer's installer, we recommend installation by qualified tradesmen.

ALWAYS check the sink for blemishes or imperfections before installation, as the cost of delivering and installing a replacement sink will be the responsibility of the customer.

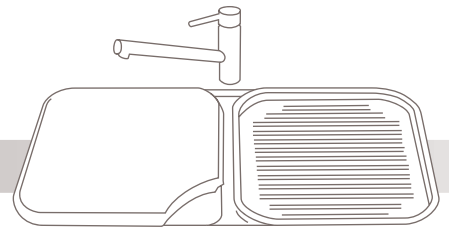

ALWAYS use the physical product measurements for cut outs. Any templates or measurements are supplied by Abey as a guide only. Abey are continually seeking ways to improve the design specifications, aesthetics and production techniques of its products. As a result, alterations to the specifications and dimensions of our products and designs occur continually.

By installing the sink, the customer accepts that it is free of blemishes or imperfections including scratches, dents, spotting, discolouration and rust.

Maintenance Hints

By following these maintenance hints, you can maintain the finish of your stainless steel for longer:

- ✓ Scratching on the surface of sinks will occur over time through normal usage; scratches cannot be removed but only made less noticeable by using stainless steel polishing creams and cleaning products. The best form of maintenance is frequent, regular cleaning. A little bit of cleaning on a regular basis is preferable to a major cleaning on a sporadic basis.
- ✓ The best method of preventative maintenance is to ensure the sink is clean and dry. Rinse and towel dry the sink after each use in order to minimise major clean ups - keeping it shiny and relatively free of water spots.
- ✓ Keep the sink fixture free of any standing water, which may build up mineral deposits. The quality of your water can affect the sink's appearance and this water quality will vary from household to household.
- ✓ To clean your sink, use the mildest cleaning procedure that will do the job effectively. Exercise extreme care with household cleaners in particular strong detergents or bleaches.
- ✓ Always rinse the sink after using a cleaning agent, and wipe the sink dry to discourage any water spotting.
- ✓ Metallic scouring pads and steel wool pads must never be used to clean your sink or any utensils in the sink, as they will leave a residue of small iron particles. They may not even be readily visible, but they most certainly will lead to rusting and corrosion of the sink.
- ✓ Do not leave any mild steel, or cast iron cookware, or implements, anywhere on the sink for extended periods of time. The combined presence of iron and moisture with stainless steel can only lead to surface corrosion and staining of the sink.
- ✓ Do not leave wet sponges or cleaning pads in the sink overnight as they will trap water underneath which could lead to staining and discoloration of the sink surface. The unique properties of stainless steel are dependent upon exposure of the surface to the atmosphere.
- ✓ We recommend that you don't use chlorine bleach in your stainless steel sink, as chlorine will attack the protective layer that makes stainless steel truly stainless. Any drain cleaning products containing sulphuric or hydrochloric acid will attack the sink.
- ✓ For the occasional treatment of grime and mineral deposits that may build up over time, use cleaning products specifically designed for stainless steel, following the manufacturer's instructions.
- ✓ If rusting or spotting occurs, it can easily be removed with the use of a cutting compound, a soft scrubber (such as nylon or plastic) and a little elbow grease.

NEW RELEASE ➔ **2010 Sinkware Collection**

The new Culino™ Dual Mixer, a sink mixer and filtered water tap all-in-one, offers new levels of function and simplicity in the kitchen.

Imagine just one clever mixer performing two essential functions for that clean, minimalist look... With an ample supply of sparkling, fresh tasting water for drinking, food preparation, cooking etc at the flick of a lever, the Culino™ Dual Mixer becomes a performance culinary tool.

Culino Dual Mixer Systems

The Culino™ Dual Mixer comes in bright, mirror polished chrome or stylish brushed chrome finish and features ceramic disc valve technology for a smooth, durable action. Precision built in Australia using the best materials, the Culino™ Dual Mixer complies with Australian Standards AS/NZS 3718 and the WELS regulation, carrying a five year guarantee.

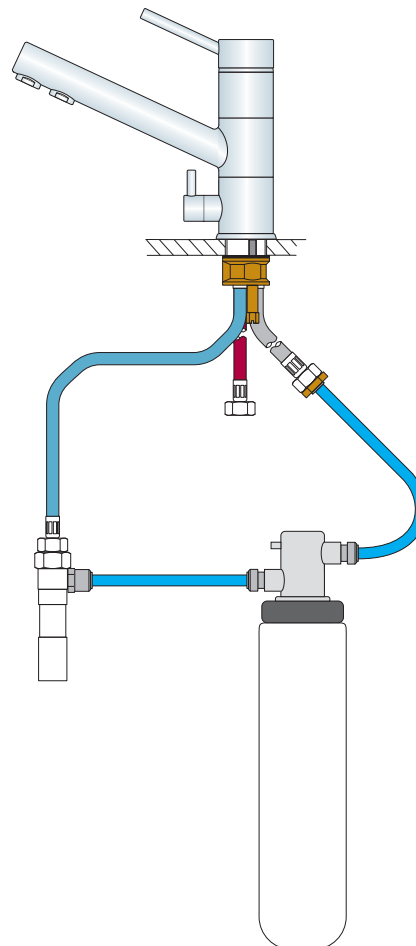

Mixer & Purification System Kit
 CD31520.11.02.CP Chrome Plated
 CD31520.55.02.BRC Brushed Chrome

Healthy, sparkling water

The effective Compact Under Sink Purification System processes water through a quick change high performance filter system with excellent results. This compact unit, just 11cm deep, 10cm wide and 45cm high, fits neatly in the cupboard, delivering purified water at around 5 litres per minute. To ensure purified water is uncontaminated by mains water, it flows through separate ports and is controlled independently with a pin lever valve. The easy to change cartridges can purify many thousands of litres of water at a fraction of the price of bottled water. This purification system uses a premium 1 micron carbon block cartridge. As well as being designed to reduce colour, taste, odours, chlorine and organic matter, this cartridge provides protection from cryptosporidium, giardia and other filterable cysts producing, sparkling clean drinking water.

Installation & operation

The Culino™ Dual Mixer can be fitted through a sink or benchtop. The sink mixer operation is as normal by means of the main handle and water flows from the aerator at the end of the swivel spout. The valve incorporates an anti-scald adjustment ring and a flow limiting screw. The purification system connects to mains cold water and uses the same supply fitting as the Dual Mixer (water to be microbiologically safe). Filtered water is controlled by the pin knob at the base of the Dual Mixer and flows from the second outlet.
